

## .PLANT LIST for ACTERRA NATIVE PLANT NURSERY

**Definitions:** The following definitions for watering apply to established plants. All plants in containers require regular watering, preferably in the cool of the morning. Plants in the ground need deep watering for the first two summers in order to establish their deep root systems. Avoid frequently shallow watering.

**Irrigate:** Needs regular summer water once or twice a week depending temperature and planting environment.

**Deep:** Water 20 to 30 minutes every 10-30 days during summer depending on temperature. In some situations, an established plant may do well without any additional water.

**Fall:** Withhold water during the summer dormancy, begin watering infrequently in early fall.

**STBL:** A good plant for bank stabilization.

**GCVR:** A good ground cover plant.

**DRN:** Requires good drainage.

**ANN:** Annual.
